May I present an unusual interactive spatial-constructive-imaginative test?

Directions: Refer to these color abbreviations for each of the 7 stones presented in the 5 test item pictures that follow.

Wh = White - POWER

Bl = Blue - FAITH

Gr = Green - WISDOM

Ga = Gray - INTELLIGENCE

Ye = Yellow - TRUTH

Re = Red - DEVOTION

Vi = Violet - ORDER

The stones in each picture are arranged in a predetermined incomplete color sequence design. The first one uses 6 stones and one is left for you to position to complete the design. Find the stones you will use to complete each design at the bottom of the picture. You may place them where they complement your design and creative purpose. The 7 stones altogether form the foundation of your 2D or 3D structure.

Designs 1 and 2 are relatively easy. Design 3 is of medium difficulty. Designs 4 and 5 become increasingly more challenging.

Your task is to submit one completed design for each of the 5 plates. Use the appropriate computer program to accomplish this, or draw designs on paper and then scan them into the PDF file. Please take pride that your Skyscrapers are original and worthy of serious attention by the examiner.

Next, give a verbal explanation of your design. Your design may relate to reality or fantasy--to present, past or future--or to whatever place and circumstance your imagination takes you. Provide as complete and thorough a verbal expression of each drawing as can be shared.

Although this test is primarily untimed, if you prefer a time limit, it is set at not more than 3 hours.

Each design is graded on a value scale from 1 to 16, with 1-3 representing Below Anticipation; 4-6 EXPECTED PERFORMANCE; 7-9 Excellent Expectation; 10-13 Brilliant Performance; 14-16 Profoundly Genius Level Performance. Standard Scores range from SS 70 (3%ile) to SS 183 (99.999989%ile). Your final score is the average of all 5 scores: e.g., Mark's scores 7, 12, 10, 11, 13 = $53/5 = 10.6 = SS 144.8$ or simply 145 (16 SD). Total points have a range of 5 to 80.

What is the final outcome? Your Average Score will be presented along with SS equivalent. Do not request to know item scores or ask why you got the score you earned. In actuality, your work is compared to other submissions, which explains that you may have to wait a while to get your result. I will report individual results after 5 submissions to check the validity of Skyscraper 5 Sigma. An internal reliability coefficient will be shared over time at IQExams FB group site.

Review

- 1) Go back and study the directions for completing the test.
- 2) Make certain you have your completed drawing in either 2D or 3D.
- 3) You must explain and describe the meaning of your design. Reread your response to make certain you have included everything you want the examiner to know.

Drawings without written description receive only half credit.

Submit your work in PFD and email to: drgregagrove@gmail.com.
Thank you. (Make certain you have given an email address where your test result is to be emailed.)
