

*By John Culkin*

Welcome to IS33, an untimed spatial IQ test with 33 puzzles measuring innate logical and visual-perceptual abilities. Many items are very difficult, and are not in difficulty order, so it is recommended to spend at least 10 hours solving the test. Answers can be hand-drawn or computer drawn, as long as the answers are shown clearly. Yellow boxes contain the questions, text and drawings in purple are the hints, red question marks show what is missing from the picture, and the blue boxes are where you draw answers to complete the image. Incomplete answers are not giving points. Take your time, try your best, and enjoy!
